

Daniel Nall,

PE, FAIA, FASHRAE, LEED FELLOW, HBDP, BEMP

Vice-President

Dan Nall has been involved in the design of high performance buildings for over 35 years. Beginning with advising in the design of passive solar buildings, including a community college classroom building and a house addition, in the late 1970's, he has progressed to designing the mechanical systems for LEED Platinum university buildings and corporate headquarters. Because of his architectural training, he is adept at recognizing the architectural vision for the projects on which he works, and configuring his engineering design solutions to conform to or even enhance that vision. He is particularly adept at integrating building systems with architectural elements and is a recognized expert on thermally active floors and underfloor air distribution systems.

He has been recognized for his contributions to high performance building design by his election to the AIA College of Fellows in 2003, appointment by the USGBC to the inaugural class of LEED Fellows in 2011, and his election to ASHRAE Fellow in 2014.
